If you need to add software to your computer with specific data, it is a good practice to install programs in a disk that is hidden from the user. In such a scenario, you might need to use an application that lets you create a specific disk that you can only access using your password. To sum up, Password Disk Creator is a software tool which makes it possible to create a special disk with your specified data. Create data-protected disks The utility does not require you to have technical background and the software does not include any third-party products. Moreover, you can use it without installing any additional tools or utilities. All you need to do in order to access a disk protected with a password is to create one. The generation process is pretty straightforward and requires only a few steps. You need to first define the desired disk name, the size and the password. In some cases, you can also set the password length, the number of characters to add and the character encoding, so as to avoid using special characters. The next step is to specify whether the disk should be displayed or hidden, if the installation location should be hidden, as well as select the type of data to be included in the disk (document, audio, video, images and others). After that, the disk's name and size will be applied, and the installation process will be started automatically. Open a disk with a password If you need to open a disk protected with a password, the process is equally simple and straightforward. All you need to do is enter your username and password and then click on the "Open Disk" button. A specific icon will be displayed and you can simply double-click on it to open the protected disk. Clean GUI Although Password Disk Creator does not come with any extra features or tools, its minimalist interface makes it suitable for casual users and professionals alike.
